

D' CUBE

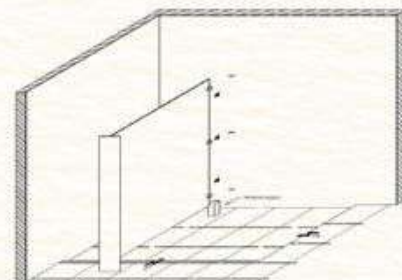

1) Site measurement will be taken before install by our team for factory pre-fabrication

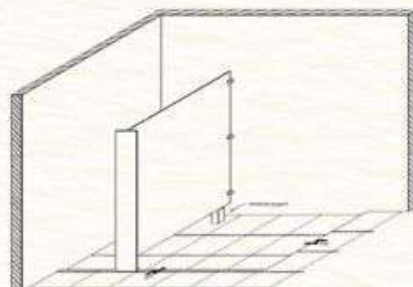

2) Mark dimension on the floor & wall during installation day

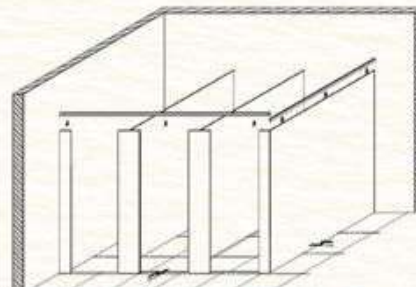

3) Prepare the connection between the plaster and the dividing panel using the wall angle

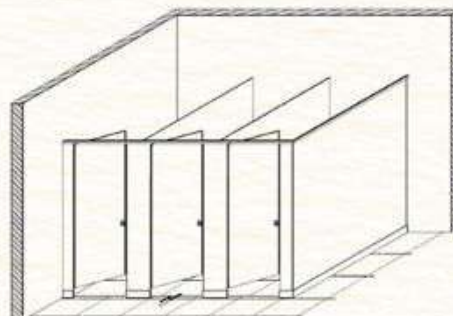

4) Position and secure the dividing panel to the wall with temporary holding support

5) Position and secure the dividing panel to the wall using temporary supports, then continue the same procedure for the remaining panels.

6) Set the top rail in place and ensure it is properly aligned

7) The last step involves installing the door panel along with all required accessories
